

Information and Sample Images

GlasClay™, is glass in a clay like form. This exciting medium allows glass to be formed three-dimensionally. Use GlasClay™ to create free-standing, hollow or solid objects—make beads, pendants, sculpture, or accents to incorporate into other glass work. To use, simply add water, knead a minute or two, form your piece, and kiln fire!

As with all kilnworked glass, GlasClay™ can be fired at different temperatures to create different effects. (Fire at higher temperatures AFTER an initial firing between 1220 and 1240 degrees Farenheit.) After the initial firing, GlasClay™ can be re-fired many times and added to other GlasClay™ work or to other compatible glass objects. It can be used with sheet glass, frit, and enamels.

GlasClay™ is currently available in 24 colors and is made from Uroboros and Bullseye glass in 90 & 96 COE's.
