Notes on the Care and Handling of Dichroic Glass:

The coating on Dichroic glass is vulnerable to scratches and damage from solvents, oils, adhesives, and fluxes. Therefore, the glass should be handled carefully and protected from abrasions. When necessary, Dichroic glass can be cleaned using mild soap and water or a mild glass cleaner and dried with a soft cloth.

Leaded Glass Application

When fabricating a panel designed to include Dichroic glass, use a cutter without oil, and score the glass on the uncoated side. The coating can be protected from soldering and grouting phases by covering it with low tack tape or contact paper that is easily removed when finished (be sure to test first with a small scrap piece of glass).

Lamination Application

Some Dichroic jewels and bevels are made by laminating the clear bevel to a coated sheet of thin float glass. This process layers the coating between the glass and the jewel, and thus it is protected from the dangers listed above.

Fused Glass Application

Fusing Dichroic glass not only produces captivating effects, it eliminates all the vulnerabilities listed above as well. The fusing process molecularly binds the glass and the coating materials. Reflective colors difficult to perceive on clear glass will intensify when fused onto a background of black glass. Clear glass offers versatility as it can be fused with Dichroic coating either up or down. When fused Dichroic side down, the coating will be encased in a layer of clear. When fused Dichroic side up, a soft metallic effect is achieved.

Anmerkungen zum Umgang und zur Behandlung des Dichroic Glases:

Die Schicht auf Dichroic Glas ist anfällig für Kratzer und für die Beschädigung durch Lösungsmitteln, Öle, Kleber und Flussmittel. Folglich sollte das Glas sorgfältig angefasst werden und vor Abnutzungen geschützt werden. Falls notwendig kann Dichroic Glas mit milder Seife und Wasser oder einem milden Glasreinigungsmittel gesäubert werden und mit einem weichen Tuch getrocknet werden.

Bei Arbeiten mit Dichroic Glas, benutzen Sie bitte einen Glasschneider ohne Öl, und schneiden Sie das Glas auf der unbeschichteten Seite. Die Schicht kann vor den lötenden und überziehenden Phasen geschützt werden, indem man es mit dünnen Klebeband oder Kontaktpapier bedeckt, das leicht entfernt werden kann, wenn es fertig gestellt ist. (Vor der Entfernung an einem kleinen Reststück Glas prüfen).

Einige Dichroic-Muggelsteine und Facetten werden hergestellt, indem man die klare Facette mit einer überzogenen Schicht des dünnen Floatglases laminiert. Dieser Prozeß überlagert die Schicht zwischen dem Glas und dem Muggelstein, und wird folglich vor den Gefahren geschützt, die oben beschrieben werden.

Das Fusen von Dichroic Glas produziert nicht nur faszinierende Effekte, es beseitigt auch die ganzen Anfälligkeiten, die oben beschrieben werden. Der Fusingprozeß bindet molekular das Glas und die beschichteten Materialien. Die reflektierenden Farben, die schwierig auf freiem Glas wahrzunehmen sind verstärkt, wenn sie auf einen Hintergrund von schwarzen Glas fixiert werden. Klares Glas bietet eine vielseitige Verwendbarkeit, weil es mit der Dichroic Schicht entweder oben oder unten geschmolzen werden kann. Wenn die Dichroic Seite unten geschmolzen ist, wird die Beschichtung in einer Schicht von klaren Glas eingehüllt. Wenn die Dichroic Seite oben fixiert ist, wird ein weicher metallischer Effekt erreicht.

Farbwechsel von Dichroic-
Glas unter veränderten
Blickwinkeln.
Changing the angle of
viewing results in varying
color combinations.

Wichtige Information für die
Verarbeitung von Dichroic
Gläsern

Beim Verschmelzen von
identischen Dichroic Gläsern kann
es zu Farbabweichungen im
Endprodukt kommen.

Important information for
working with dichroic glass:

When fusing identical dichroic
glasses, color deviations can occur
in the final product.

Was ist Dichroic Glas :

Dichroic ist eine high-tech optische
Schicht, die selektiv bestimmte
Wellenlängen (Farben) des Lichtes
reflektiert und die restlichen
Wellenlängen durchlassen läßt.
Dieser gleiche Effekt wird in der
Natur in Pfaufedern und Opalen
gesehen. Das Wort "Dichroic"
bedeutet zwei Farben, welches
sich auf die übertragene Farbe und
reflektierte Farbe bezieht. Der
beschichtende Prozeß erfolgt in
einem hohen Vakuumraum, der
einige Spezialgeräte als Ausrüstung
hat um den beschichtenden
Prozess zu steuern und zu
überwachen.

What is Dichroic Glass:

Dichroic is a high-tech optical
coating that selectively reflects
certain wavelengths (colors) of light
and allows the remaining
wavelengths to transmit through.
This same effect is seen in nature in
peacock feathers and opals. The
word "dichroic" means two colors,
which refers to transmitted color
and reflected color. The coating
process is done in a high vacuum
chamber that has several pieces of
specialized equipment to control
and monitor the coating process.

Da der Charakter des Dichroic-
Glases der Wechsel ist, ist es nahezu
unmöglich diese Gläser farblich im
Katalog abzubilden. Um Ihnen das
Prinzip des Glases zu demonstrieren
haben wir in einer Bilderfolge ein
Glas in verschiedenen Winkeln
fotografiert. Wie Sie sehen, könnte
jedes Foto auch für ein anderes Glas
stehen. Dichroic-Gläser sollten Sie
niemals in einer Serie einsetzen wo
ein Stück wie das andere sein soll.
Dichroic-Gläser sollten Sie immer
wie ein Stück Einmaligkeit einsetzen.

The character of dichroic glass is its
changeability, which means that it is
nearly impossible to illustrate this
product on a color catalog page. To
demonstrate the principle of dichroic
glass, we have taken a series of
photos viewed from various angles.
As you see, each Foto could be the
image of a totally different glass.
Dichroic glass should not be used for
a series where one piece is to
resemble the next. Dichroic glass
should always used to represent a
piece of uniqueness.
